

## Health needs happen 24/7— so should your care.

90 Degree Benefits offers a revolutionary Direct Primary Care (DPC) solution that cuts through the complexity of healthcare, improving the quality of care received and generating savings for employers and members. This program eliminates medical care barriers. DPC is not telemedicine—it is a form of concierge medicine that enables 24/7 patient access to the full range of comprehensive primary services including routine care, regular checkups, preventive care, and care coordination.

Through effective engagement, quality and price transparency, patients begin acting more as consumers, shopping for healthcare services as they would for other products. This is a complete shift from traditional services administered through networks, where the total cost is a seldom consideration.

## The Direct Primary Care Advantage with 90 Degree Benefits

90 Degree Benefits' DPC solution provides extensive concierge medical services and care, including:

- Preventive Medicine
- Men's & Women's Health
- Children & Seniors
- Chronic Disease Management
- Healthy Lifestyle Management

Our proactive concierge services are member focused and serve to guide patients through the complex healthcare system. 90 Degree Benefits delivers a platform that acts as a safe-haven environment for patients within self-funded employer populations, giving them high quality care in a manner that is cost-effective for both the employer and the employee.

**90 Degree Benefits' DPC can decrease costs up to 30%.**

# Our Direct Primary Care Solutions and Services

90 Degree Benefits brings innovative solutions to health benefit plans through two versions of DPC: Virtual Concierge and Complete Concierge. Our goal is for you and your members to be able to choose the appropriate method for addressing their healthcare needs. We can also work with physicians to create a concierge delivery model across your current member base, customized to the needs of the member and the plan.

**These unique solutions are based on exceptional member service, patient advocacy, improved quality of care and reduced cost.**

## Virtual Concierge

Virtual Concierge allows online and telephonic access to DPC health providers no matter where members may be. 90 Degree Benefits works with a large and technologically connected system of medical specialists for virtual consults. Through this, we are able to improve accessibility of care for the health plan and the plan participant.

## Complete Concierge

Complete Concierge brings tangible value and improved member experience to your health plan. By placing an expert concierge doctor at the hub of your self-funded health plan, physicians are available both online and in person. Concierge medicine protects employees and the health plan from needless frustration and financial harm.

## Add Value, Lower Costs

### Telemedicine vs. Direct Primary Care

Service	Telemedicine	DPC	Effect on Employer Health Expenses
